Upper body hypertrophy — Session C

Focus block · 9 targets · shoulder, elbow, wrist at loading stage 2 · spine at 1 · ~38 min · 24 working sets

Muscle group

Chest · Front delt · Side delt · Rear delt · Back · Biceps · Triceps · Abs

Before: upper mobility routine, pre half · then 1–2 light warm-up sets
Outside the exercise time (R19) · use current working loads; new exercises start at the stated RIR

A — Superset 1: Chest + Lats (~12.5 min · 4 rounds · 60–90 s after each pair)

1	**Smith machine incline press (30° bench)** Upper chest (L) · front delt and triceps assist Safeties at torso level · wrists over forearms · no bounce	4 × 10–12 3 RIR · wk 5+: 2 Smith + bench

↕ then immediately

2	**Lat pulldown (pull to the upper chest)** Lats (M) · biceps and upper back assist · any grip width Top: ~90–95% arm extension, blades braced, never to the ears	4 × 10–12 3 RIR · wk 5+: 2 Cable · high pulley

B — Superset 2: Triceps + Rear delt (~13 min · 4 rounds · 60–90 s after each pair)

3	**Band overhead triceps extension** Triceps (M) · shoulder blades braced overhead (R6) Soft elbow at the top, where the band is heaviest	4 × 10–12 2 RIR · wk 5+: 1 Band + frame

↕ then immediately

4	**Chest-supported dumbbell rear delt fly (incline)** Rear delt (S) · upper back assists Arms stop in line with the shoulders · soft elbow	4 × 12–15 2 RIR · wk 5+: 1 DB + bench

C — Superset 3: Side delt + Abs (~14 min · 4 rounds · 60–90 s after each pair)

5	**Dumbbell lateral raise, both arms** Side delt (S) · raise to 80°, just below shoulder height Soft elbow · both arms together · no shrug	4 × 12–15 2 RIR · wk 5+: 1 Dumbbells

↕ then immediately

6	**Plank (on the forearms)** Abs (M) · spine neutral, no sag into the low back Too easy at 60 s → harder variant, not longer	4 × 48–60 s 8 s in reserve · wk 5+: 4 Floor

After: mobility post half · day after: no archery
Chest, delts, back, triceps and abs collect sets here — archery's day-before muscles (R21)
Next day, train only if that morning's step gate passes for every joint both sessions load (R20)

Every rep, every set — hypermobility rules

- Lower every rep over 2–3 s; keep a soft bend at every joint, no lockout (R25 · R2)
- Peak effort at ~70–80% of your range, never end range: stage 2 opens full range, not end range (R1 · R3)
- Skip the session if joints feel loose; end a set the moment a joint feels unstable (R9)
- Weeks 1–4: compounds 3 RIR, isolation 2 RIR; from week 5: 2 and 1 (R18) — week 1 = your first session
- Both arms together on every exercise: one-arm work waits for loading stage 3 (R12)
- Holds: end ~8 s before failure (wk 5+: ~4 s); too easy at 60 s → harder variant, not longer (R16)
- Progress: top of the rep range twice → your smallest load step, reps back to the bottom (R42)
- Log the step gate after each session; a fail repeats last week's dose for that joint (§2.6 · R43)

Session timeline

Mobility pre half → warm-up sets → A → B → C → mobility post half
Exercise time ≈38 min (R40: 4 s a rep, top of every range, 90 s after each pair) · 24 working sets

Working sets — here · week (direct + half-sets from compounds) · ≈10 a target (R33)

Chest 4 · week 10
Front delt 0 · week 7 + 3.5
Side delt 4 · week 10
Rear delt 4 · week 7 + 3
Lats 4 · week 7 + 3
Upper back 0 · week 9 + 2 (1 above, R48)
Biceps 0 · week 7 + 5
Triceps 4 · week 7 + 3.5
Abs 4 · week 10

Alternatives — if a station is taken (each avoids the primary's stations, R41)

# Primary exercise	Alternative 1	Alternative 2
1 Smith incline press	Push-up, feet on the low box	DB floor press
2 Lat pulldown	Pull-up or assisted pull-up	Band lat pulldown
4 Chest-supported rear delt fly	Band reverse fly	Bent-over DB rear delt fly
